Chinese Botanical Extract Library

ChromaDex is the leading provider of botanical reference materials, and research grade materials for the natural products industry since 1999. Our supply chain network is global and can provide botanicals that would be otherwise difficult to obtain. Our botanical extract libraries are one of a kind in terms of uniqueness and variety. Many botanicals have not been fully characterized for their biological activities and even less is known how the synergistic effects of the phytochemicals in botanicals can affect these activities. This allows for a unique screening of activity through compounds that are soluble in solvents/polarities throughout our botanical libraries.

Traditional Chinese Medicine (TCM) has been a long mis-understood field of discovery even though many of the plants have bioactive compounds; and it has been in practice for over 3000 years! ChromaDex carries a line of botanical extract libraries suited for discovery of active compounds contained in interesting plant species in and around TCM, as well as other various plants that are available from China. Many thought-invoking research has been done with natural products over the last century and some of our current pharmaceutical drugs were once derived from plant compounds. If you are in drug discovery or a similar field, please look in our extensive Chinese botanical reference library for the compounds/activities that might interest you.
